

PRODUCT DESIGN

I analyzed the common patterns across companies and found that **80% of the structure is nearly identical.**

Ko-fi · Passionfroot · Aspire · CreatorIQ · Later · Qoruz · Koflucose · Influencer.in · Amplify · Popular Pays · Creator.co · Chtrbox · Opraahfx · Opraahfx · PulpKey · Sprout Social

INFORMATION HIERARCHY

Every great landing page answers these.

1. What is this?
2. Why should I care?
3. Why should I trust it?
4. How does it work?
5. Why is it better?
6. What should I do next?

Everything else is decoration.

LANDING PAGE STRUCTURE

Most successful SaaS sites follow:

Announcement Bar (OPTIONAL- Later -)

Navigation

Hero

Social Proof

01. Navigation & Header

(Top-bar structure and behaviour | Universal - all 16 sites)

Sticky fixed top navbar - logo left, CTA right

The navbar stays **pinned** at the top as you scroll. Logo is always left-aligned, primary CTA button always right-aligned. Never hidden on desktop, even on long pages.

Examples

- Ko-fi - : Ko-fi - logo far left, "Sign up free" blue button far right - stays fixed through all scroll positions
- CreatorIQ - : Logo left, full nav links centre, "Get a Demo" dark button pinned right - navbar gains white background on scroll
- Aspire - : Aspire - logo left, "Book a Demo" button right - transparent on hero, white-filled after first scroll
- Later - : Later - logo left, "Get Started Free" purple button right - consistent across all their landing variants
- Qoruz - : Qoruz logo left, "Sign Up for Free" orange CTA right, sticky through the entire page
- Passionfruit - : Logo left, "Get access" pill button right - starts transparent over hero video, fills on scroll
- Sprout Social - : Sprout logo left, "Start free trial" green button right - enterprise feel with full mega-nav in between

Dual CTA in navbar - ghost "Log in" + solid "Sign up"

Two actions always appear together: a low-emphasis text or ghost link for returning users ("Log in") and a high-emphasis solid button for new visitors ("Sign up / Get demo"). The contrast creates immediate visual hierarchy.

Examples

- Ko-fi - "Log in" text link + "Sign up free" filled blue button - same weight text, contrasting backgrounds
- Aspire - "Login" dropdown (for Brands / Creators) + "Book a Demo" solid dark button
- Passionfruit - "Login" ghost link + "Get access" filled pill - creator and brand login split into sub-options
- CreatorIQ - "Login" muted text + "Get a Demo" filled button - enterprise-style pairing
- Later - "Log in" text link + "Get Started Free" purple button
- Qoruz - "Login" text + "Sign Up for Free" orange button
- Popular Pays - "Log in" ghost + "Get a Demo" brand-coloured solid button
- Koflence - "Login" + "Get Started" purple CTA - consistent pairing across all scroll positions
-

Minimal nav links (3–6 items), dropdowns for complexity

Top-level nav stays lean. Complex platforms add dropdown mega-menus under 1–2 nav items rather than expanding the top bar itself.

Examples

- Ko-fi - : Only 3 links: *How it works* · *Blog* · *Log in* - extreme minimalism, converts cleanly
- Passionfroot - : 4 nav items: *For Brands* · *For Creators* · *About* · *Careers* - audience-first labelling
- CreatorIQ - : 5 items with mega-menus: *Product* · *Customers* · *Resources* · *Partners* · *Pricing*
- Aspire - : 4 items: *Platform (mega-menu)* · *Services* · *Customers* · *Resources* - mega-menu breaks into 3 sub-columns
- Qoruz - : 5 items: *For Brands* · *For Agencies* · *Product* · *Resources* · *Pricing*
- Koflence - : Clean 4-item nav: *Platform* · *Solutions* · *Resources* · *Pricing*
- Later - : 5 items: *Features* · *Pricing* · *Blog* · *Integrations* · *Enterprise*

Mobile hamburger - desktop always expanded

No site hides navigation behind a hamburger on desktop. Mobile breakpoint (usually ≤768px) collapses all links into a hamburger icon that opens a slide-in or dropdown drawer.

Examples

- Ko-fi - - Hamburger on mobile opens a full-screen overlay with log in + how it works
 - Aspire - - Mobile drawer slides in from right, stacks all mega-menu items as accordion sections
 - Qoruz - - Hamburger opens full-width dropdown panel below the nav bar - not a slide-in
 - Passionfroot - - Mobile nav collapses to logo + hamburger only, opens vertical stack of all links with sign up CTA at bottom
 - Sprout Social -- Mobile hamburger opens drawer with sub-accordions for each mega-menu category
-

02. Hero Section

(Above-the-fold design and messaging | Universal - all 16 sites)

Short benefit-first headline (5–12 words)

Every hero headline leads with an outcome or emotion - not a product description. Always sentence case. 48–72px size. The visitor understands the value prop in under 3 seconds.

Examples

- Ko-fi - - *"Love what you do and make money too"* - emotion-first, rhyme makes it memorable
- Passionfruit - - *"The Agentic Marketing OS for the AI era"* - tech-forward, positions against legacy tools
- CreatorIQ - - *"Creator Marketing at Scale"* - 4 words, enterprise-grade confidence
- Qoruz - - *"Built for Modern Influencer Marketing Ops"* - job-to-be-done framing
- Aspire - - *"Build lasting relationships and drive ROI"* - dual benefit, brand + performance
- Later - - *"The social media management platform built for growth"* - category + promise
- Kofluence -- *"Influencer marketing made simple"* - anti-complexity positioning
- Influencer.in -- *"India's largest influencer marketing platform"* - geographic authority claim
- Popular Pays -- *"A new approach to creator marketing"* - contrarian, implies incumbents are outdated
- Sprout Social -- *"Real influence, real results"* - alliteration + anti-vanity-metrics message

Supporting subheadline - 1–2 lines, specifics

Directly below the headline, 16–20px, adds the "how" or "who for" that the headline couldn't fit. Rarely exceeds 25 words.

Examples

- Passionfruit - - *"Drive growth through trusted, human voices at scale. Find them, pay them, see the impact - no spreadsheets, no guesswork, no chaos."*
- Ko-fi - - *"Join all types of creators getting tips, memberships and sales from their fans!"*
- CreatorIQ - - *"Powers the world's leading brands with AI-driven intelligence and unified workflows to scale creator-led growth - safely, seamlessly, and at scale."*

- Aspire - - *"Join today's top ecommerce brands on the leading influencer marketing platform."*
- Qoruz - - *"An award-winning platform, purpose-built for advanced marketing teams to manage all influencer workflows."*
- Later - - *"Plan, schedule, and analyze your social content - all in one place."*
- Chtrbox -- *"Connect brands with the right influencers for meaningful, measurable campaigns."*
- Amplify -- *"The creator economy platform for brands ready to scale authentic content."*

Primary CTA button - action verb, high contrast

The most visually dominant element below the headline. Filled brand colour, rounded corners, always an active verb. Never "Learn more" as the primary CTA.

Examples

- Ko-fi - - *"Get started"* - sky blue fill, white text, rounded pill shape
- Passionfruit - - *"Start for free"* - dark filled pill alongside a ghost *"Watch the trailer"*
- CreatorIQ - - *"Get a Demo"* - B2B standard; demo over self-serve because of enterprise pricing
- Qoruz - - *"Sign Up for Free"* - orange button, high contrast against white hero
- Later - - *"Get Started Free"* - purple fill, pill shape
- Aspire - - *"Book a Demo"* - dark navy fill, signals enterprise sales process
- Popular Pays -- *"Get a Demo"* - consistent with the B2B demo-first pattern
- Kofluence -- *"Get Started"* - purple CTA matching brand colour
- Influencer.in -- *"Start a Campaign"* - uniquely specific, skips the generic "sign up"

Hero visual - dashboard screenshot, product mockup, or video

Always an actual product visual - never stock photos or abstract illustrations alone.

Positioned right of text (split) or below (stacked). Shows the tool in action.

Examples

- Ko-fi - - Embedded product walkthrough video clip showing a creator page in action
- Passionfruit - - Full-bleed muted hero video loop showing the dashboard with an AI chat interaction ("Ask Zest anything...")
- CreatorIQ - - Dashboard screenshot of creator search results with analytics overlays
- Later - - Auto-playing product demo video of the calendar scheduler UI
- Aspire - - App mockup showing creator profiles with engagement metrics and match scores
- Qoruz - - Interactive search widget embedded in the hero itself - type a category and see live influencer results
- Sprout Social -- Browser-frame screenshot of the influencer discovery dashboard with filter sidebar
- Koflence -- Floating UI cards showing campaign metrics and creator match scores

Social proof snippet embedded in or just below hero

A credibility signal placed within the hero section itself - before the user scrolls an inch. Can be a stat, rating badge, or quote.

Examples

- Ko-fi - - *"Join 1,000,000+ creators"* - community size stat directly in hero headline area
 - Qoruz - - *"Rated 4.5 on G2 Crowd"* badge with stars - top-left of hero, before the headline
 - Passionfruit - - Customer quote from Rani Kubersky (Graphite) displayed as a floating card over the hero video
 - Influencer.in -- *"India's largest"* claim in the headline itself acts as the social proof hook
 - CreatorIQ - - Client logos (AB InBev, Disney, Unilever) shown immediately below hero text before any feature content
 - Aspire - - *"Join today's top ecommerce brands"* in subheadline - implied social proof through association
 - Later - - G2 and Capterra rating badges displayed beside the hero CTA buttons
-

03. Social Proof & Trust Signals

(Credibility-building elements throughout the page | Universal - all 16 sites)

Client / brand logo strip - greyscale, auto-scrolling marquee

A horizontal row of recognisable brand logos placed immediately after the hero or as the first section. Always greyscaled or low-opacity to avoid colour conflicts. Many use an infinite-loop horizontal marquee.

Examples

- Qoruz - - Amazon miniTV, Bajaj, Dabur, Deloitte, ITC, Kotak, L'Oreal - 7+ logos in a static row with Indian brand focus
- Passionfruit - - Intercom, ElevenLabs, Figma, Framer, Auth0, Replit, Gamma, HubSpot, Graphite, Attio - infinite marquee, 2 rows
- Aspire - - Revolve, Caraway, Loop Earpods, Cuts - ecommerce-focused clients in a scrolling strip
- CreatorIQ - - Disney, Unilever, AB InBev, Airbnb - enterprise household names, positioned to impress CMOs

Testimonial quote cards - avatar, name, title, company

Real customer quotes in card format with full attribution. Layout is either a 2–3 column static grid or a single auto-playing carousel. Never anonymous quotes.

Examples

- Aspire - - 3-column testimonial grid mid-page - each card has headshot, quote, name, role, and company logo
- CreatorIQ - - Rotating carousel of quotes from enterprise CMOs - each quote paired with a measurable result
- Popular Pays -- Full-width testimonial bar with rotating quote + customer name + company - minimalist presentation

Quantified stats in a 3-number row

Three key numbers displayed side by side - platform scale, customer count, or outcome metrics. Large font size (36–56px), short label below each. Sometimes animated to count up on scroll.

Examples

- Ko-fi - *1,000,000+ creators · 0% fees on tips · Instant payouts* - benefit stats rather than vanity metrics
- Influencer.in - *50,000+ influencers · 500+ brands · 10,000+ campaigns* - platform scale trifecta
- Kofluence - *2M+ creators · 500+ brands · 25K+ campaigns delivered*
- Chtrbox - *1M+ influencers · 300+ brands · 5,000+ campaigns*

Third-party review platform badges (G2, Capterra, etc.)

Badges from independent review platforms shown as trust marks - especially important for B2B buyers who need external validation before a demo call.

Examples

- Qoruz - G2 Crowd badge with 4.5-star rating shown in the hero section itself - very prominent placement
- Sprout Social - Multiple G2 category leader badges (Social Media Management, Influencer Marketing) in a dedicated trust bar
- Aspire - G2 "Leader" and "High Performer" badges in footer and pricing sections
- CreatorIQ - Forrester Wave recognition badge + G2 Leader badge - analyst recognition over peer reviews

Case study / result teaser cards

Short preview cards showing a specific brand result - headline metric, brand name, and "Read more" link. Converts skeptics by showing measurable outcomes, not just features.

Examples

- CreatorIQ - Full "Customers" section in nav dedicated to case studies - industry-segmented (Beauty, Gaming, CPG, etc.)

- Aspire - *"How Caraway drove 3x ROAS with creator partnerships"* - card with brand logo, metric, and CTA
 - Later - Case study strip showing brand outcomes: time saved, follower growth, engagement lift
 - Sprout Social -Customer stories section with filtered tabs by industry - acts as both social proof and segmentation
 - Koflucence -Campaign showcase grid showing brand + influencer pairings with campaign results
-

04. Feature Showcase Patterns

How features are structured and presented | Universal - all 16 sites

Alternating text + image rows ("zigzag" layout)

Feature sections alternate between text-left/image-right and text-right/image-left. Creates visual rhythm and gives each feature equivalent real estate. Used for the 3–5 core product capabilities.

Examples

- Aspire - Discover → Manage → Convert → Measure - each step gets one alternating row with a full dashboard screenshot
- CreatorIQ - 4 core capabilities in zigzag rows: Discovery / Management / Campaign / Measurement - all with annotated UI shots
- Passionfruit - Plan strategy → Run campaign → Measure results - 3-step alternating layout with AI interface screenshots
- Qoruz - Discovery → Campaign Management → Reporting in zigzag with annotated platform screenshots
- Koflucence -Search → Brief → Execute → Report - each phase gets one alternating row

3-column icon + short-text feature card grid

Secondary feature grid below primary alternating rows. Each card: outline icon top, bold feature name, 1–2 sentence description. Never filled icons. Usually 3 columns, sometimes 4.

Examples

- Ko-fi - 3-column grid: Tips with 0% fee · Memberships · Shop · Commissions - each with outline emoji-style icon
- Later - 4-column mini-feature grid: Visual planner · Analytics · Linkinbio · Scheduling - outline icons, 2 sentences each
- Aspire - 3-column secondary features: Creator Marketplace · Affiliate tracking · Brand safety - below the main zigzag section
- Qoruz - Feature grid: Influencer search · Campaign tracking · Competitor analysis · Market research
- Passionfroot - 3-column AI capability cards showing "Plan strategy", "Run campaign", "Measure results" with AI interface thumbnails

Feature headlines frame an outcome, not a capability

Section headings describe what the user gains, not what the product does. "Find the perfect creator" not "Creator search". "See your ROI clearly" not "Analytics dashboard".

Examples

- Aspire - *"Build lasting relationships"* - not "Creator CRM" or "Influencer management"
- Passionfroot - *"Drive growth through trusted, human voices"* - not "Influencer campaign tools"
- Later - *"Grow your audience and your revenue"* - not "Scheduling and analytics"
- CreatorIQ - *"Scale creator-led growth - safely, seamlessly"* - not "Enterprise influencer platform"
- Qoruz - *"From planning to performance"* - end-to-end outcome framing, not feature listing
- Sprout Social - *"Real influence, real results"* - anti-vanity-metrics message as section anchor

Annotated product screenshots with callout overlays

Dashboard screenshots with floating UI bubbles, highlight boxes, or arrow callouts pointing to specific features. Shows real product without a demo - reduces the demo booking barrier.

Examples

- Aspire - Creator search screenshot with callout boxes highlighting audience demographics and engagement score filters
- Sprout Social -Influencer discovery UI with callout arrows pointing to fake-followers detection score and audience overlap tool
- Qoruz - Influencer profile page screenshot with overlaid metric cards (engagement rate, audience quality score, past brand collabs)
- Koflucose -Campaign dashboard with floating cards showing content approval status and payment pending notifications
- Passionfroot - AI workflow interface screenshot with a cursor animation showing the "Ask Zest" query being typed in real time

Audience segment tabs / toggle (Brands vs Creators)

When a platform serves two audiences, tab controls let visitors self-select. Each tab shows different content, features, or CTAs relevant to that audience. Reduces overwhelm and improves conversion per segment.

Examples

- Passionfroot - *"For Brands"* / *"For Creators"* tabs in the main navigation - changes entire page context
- Ko-fi - Creator type carousel at the bottom of features: Streamers · Artists · Writers · Crafters · Podcasters - shows relevant examples for each
- Aspire - *"For Brands"* / *"For Creators"* split - separate login portals and separate homepage messaging
- Qoruz - *"For Brands"* / *"For Agencies"* nav links lead to separate landing pages with different feature emphasis

05. CTA & Conversion Sections

(Every prompt-to-act pattern on the page | Universal - all 16 sites)

Mid-page CTA banner - full width, brand coloured

A coloured or dark-background full-width banner placed roughly mid-scroll. Repeats the main offer so visitors don't need to scroll back. Usually a single headline + button.

Examples

- Ko-fi - Sky-blue banner mid-page: *"Start earning today"* + "Get started free" button - matches navbar CTA exactly
- Later - Purple gradient banner: *"Start scheduling for free"* - appears between feature sections
- Aspire - Dark navy banner: *"Ready to scale your creator program?"* + "Book a demo" - mid-page interrupt
- CreatorIQ - Dark section with light text: *"See CreatorIQ - in action"* + demo booking link
- Qoruz - Orange brand-coloured band: *"Start your free trial"* between feature rows
- Koflence -Purple gradient CTA band placed between the stats section and testimonials
- Passionfroot - Dark warm-toned section: *"Stop managing chaos. Start driving growth."* + "Get access" button

Final bottom-of-page CTA section - every single site

Without exception: every site ends with a dedicated full-width section before the footer. Last chance to convert. Usually the most visually distinct section on the entire page.

Examples

- Ko-fi - *"Creators of all kinds, all kind!"* → final CTA: *"Get started free"* on a brand-blue background
- Aspire - *"Ready to grow your creator network?"* - dark background, white text, "Book a Demo" button
- CreatorIQ - *"The future of creator marketing starts here"* - full-width dark section, "Get a Demo" CTA
- Passionfroot - *"The AI agent for creator-led GTM"* repeated as final hook with "Start for free" CTA
- Later - *"Grow your audience. Grow your business."* - purple section, two CTA buttons: "Start Free" + "Talk to Sales"
- Qoruz - *"Take influencer marketing to the next level"* - orange background, "Sign up for free" + "Book a demo" dual CTA
- Influencer.in - *"Start your first campaign today"* - full-width dark section before footer
- Koflence - *"Ready to launch your next campaign?"* - gradient purple section, demo CTA
- Chtrbox - *"Let's work together"* - contact-us-style final CTA with email field embedded

Friction-reducing micro-copy below CTA buttons

Small muted text directly below (or alongside) the primary CTA button that removes a common objection. Always 11–13px, grey/muted. Reduces bounce from hesitant visitors.

Examples

- Ko-fi - *"No monthly fees"* and *"Set up in minutes"* - two objections handled simultaneously
- Later - *"No credit card required"* - classic SaaS friction reducer
- Passionfruit - *"Free to start, no commitment"* under "Start for free" button
- Aspire - *"Setup in under 15 minutes"* - speed objection addressed
- CreatorIQ - *"Talk to a real human"* under "Get a Demo" - reduces fear of automated sales funnels

Email input embedded directly in CTA section

Instead of linking to a signup page, some sites embed an inline email field + button in the CTA. Removes one step from the conversion flow. More common on creator-first tools than enterprise B2B platforms.

Examples

- Ko-fi - Inline "Enter your email" field + "Get started" button - stays on the same page
 - Later - Email capture in hero: *"Enter your email"* input alongside "Get Started Free" button
 - Passionfruit - Workspace selection modal triggered inline - avoids a full page redirect
 - Amplify - Email field in hero CTA section - one-step entry into their creator marketplace
 - Chtrbox - Contact form embedded in final CTA section - name + email + message
-

06. Visual Design Language

(Aesthetic choices that recur across all 16 site | Universal - all 16 sites)

White / very light color body, dark only for CTA and footer

All 16 sites use light backgrounds as the default. Dark backgrounds appear only in CTA banners, footer, and occasionally a "dark hero" variant. Sections alternate white ↔ light grey for visual separation without borders.

Examples

- Ko-fi - White hero → light blue-tint section → white → dark blue CTA → dark footer
- Aspire - White page body with #F8F8F8 alternating sections - dark navy used only for mid-page CTA and footer
- CreatorIQ - Off-white body (#FAFAFA) → dark section for CTA → very dark footer (#0D0D0D)
- Later - Clean white + light grey alternating → single deep purple CTA section → dark footer
- Qoruz- Pure white body with a faint dot-grid texture on hero - orange only for buttons and CTA sections
- Passionfruit - Warm off-white (#FAF8F8) through most of the page - dark sections only for final CTA and footer
- Koflucose -White body, light purple (#F5F0FF) tint sections, dark purple CTA sections

Single dominant brand colour for all interactive elements

One colour owns every button, link, hover state, and highlight. Consistency makes the brand colour feel intentional and makes CTAs instantly identifiable. Secondary colours are used for backgrounds only.

Examples

- Ko-fi - Sky blue (#29ABE0) - all buttons, links, icon highlights, and CTA banners
- Qoruz Orange - primary buttons, section headers, active states, and CTA banners
- Koflucose -Purple - all CTAs, hover states, and feature section backgrounds
- Later - Deep purple (#7C3AED) - buttons, links, feature icons, and banner backgrounds
- Passionfruit - Warm yellow-cream - accent on dark hero, paired with near-black for contrast
- CreatorIQ - Deep navy blue - all primary buttons and selected states; lighter blue for hover

- Sprout Social -Sprout green (#59C36A) - globally consistent across all CTAs, icons, and banners
- Opraahfx -Red/coral - consistent across CTAs, section highlights, and active states
- Amplify -Teal/cyan - primary colour on all interactive elements

Large heavy sans-serif headlines (48–72px, weight 700+)

Hero headlines are always large, bold, and sans-serif. The size creates hierarchy at a glance without needing decorative fonts. Subheadings drop sharply to 16–20px to create contrast.

Examples

- Ko-fi - Hero h1 at ~56px, 700 weight, sharp drop to 18px body - Inter or similar geometric sans
- CreatorIQ - ~64px hero headline weight 800, with tight letter-spacing for enterprise gravitas
- Later - ~56px with a mix of brand-coloured and black text in the headline split
- Qoruz - Large animated typewriter headline cycling through feature names - ~60px
- Aspire - ~52px headline with a tight 1.1 line-height - feels dense and confident
- Passionfroot - ~64px hero on dark background - white text with thin weight for the hero secondary line
- Kofluence - ~56px with a gradient colour fill on the key word in the headline

Rounded corners on all components (8–16px radius)

Every button, card, image container, input field, tag, and badge has rounded corners. No sharp rectangles anywhere in the page body. The rounding radius scales with component size - pills for small badges, 12–16px for cards.

Examples

- Ko-fi - Full pill-shaped buttons, 8px card rounding, pill-shaped creator category tags
- Passionfroot - Pill-shaped CTA buttons, 12px rounded testimonial cards, pill-shaped platform logo chips

- Later - 16px rounded product screenshot frames, pill buttons, 8px rounded feature cards
- Aspire - 16px rounded card containers for creator profiles, pill-shaped metric badges
- CreatorIQ - 12px rounded dashboard screenshots, pill-shaped feature tags and plan badges
- Qoruz - All buttons fully pill-shaped, influencer profile cards at 12px radius
- Sprout Social - Browser chrome frame around screenshots has 16px rounded top corners

Subtle hero background texture - blobs, mesh gradients, dot grids

Hero sections avoid plain flat-white backgrounds. A subtle decorative layer adds depth: a mesh gradient, soft blob shapes, or a faint dot/grid pattern. Never distracting - always behind the text.

Examples

- Qoruz - Faint dot grid pattern repeated across hero background - gives structure without colour noise
- Koflucose - Purple mesh gradient blob shapes behind hero headline
- Passionfruit - Warm amber/cream gradient fade behind hero video - feels like a warm spotlight
- CreatorIQ - Subtle radial gradient from deep navy centre to slightly lighter edges in hero
- Later - Light purple gradient wash in hero - shifts from light lavender to pure white toward footer
- Aspire - Abstract soft-blob SVG shapes in muted brand colours positioned behind product screenshot
- Opraahfx - Geometric line-art background behind hero headline - adds visual texture without photos

Max-width centred content container (~1200–1440px)

All content is constrained to a centred max-width column. Even on widescreen monitors (2560px+), content never stretches edge-to-edge. Only full-bleed background colours extend to the screen edge.

Examples

- Ko-fi - ~1200px max-width container, background colours full bleed, content centred

- CreatorIQ - ~1440px max-width for enterprise-scale information density, full-bleed dark sections
- Later - ~1280px container - wide enough for split feature rows, narrow enough for readability
- Aspire - ~1200px centred grid with generous gutters between text and product screenshot columns
- Qoruz- ~1280px container - background dot grid extends full width, content stays centred

07- Pricing & Plan Communication

(How they handle money, tiers, and enterprise | All sites with public pricing (10 of 16))

3-tier card layout - Free / Pro / Enterprise

Three pricing cards in a horizontal row. Free or Starter on the left, Pro or Growth in the middle (highlighted as recommended), Enterprise on the right with "Contact us". The middle card is always visually elevated.

Examples

- Ko-fi - Free (0% tips) · Gold (\$9/mo - "Most popular" badge) · no enterprise tier - creator-first simplicity
- Later - Starter · Growth · Advanced - middle card with border accent and "Most popular" pill badge
- Qoruz- Free · Pro · Enterprise - Pro card visually elevated with shadow and brand-coloured border
- Influencer.in -Basic · Professional · Agency - middle plan always the tallest card (more vertical space = more prominent)
- Amplify -Starter · Growth · Scale - middle card with "Best value" badge and highlighted border

Annual / monthly billing toggle - defaults to Annual

A pill toggle sits above the pricing cards. Always defaults to Annual view to show lower per-month prices. The "Save X%" badge appears on the Annual tab as an incentive to commit.

Examples

- Ko-fi - Monthly / Annual toggle with "Save 20%" badge on the Annual option - default is Annual
- Later - Toggle shows "Annual (Save 20%)" with strike-through monthly price visible alongside annual price
- Influencer.in -Monthly / Yearly toggle, yearly selected by default, "Save 30%" displayed prominently
- Qoruz - Billing toggle with green "Save 25%" badge on annual - anchors the value of long-term commitment
- Amplify -Toggle defaults to annual, monthly shown as struck-through original price below annual price
- Creator.co -Annual/Monthly toggle - price updates dynamically when switched, "Best value" badge stays on Annual

"Contact us" / "Book a demo" for enterprise tier - always

No enterprise-tier price is ever shown publicly. The highest tier always leads to a human conversation - form submission, demo booking, or email. This is universal across all B2B platforms regardless of whether other tiers show prices.

Examples

- CreatorIQ - No pricing page at all - entire site leads to "Get a Demo" - enterprise-only positioning
 - Aspire - No public pricing - all CTAs are "Book a Demo" - signals custom/contract pricing
 - Sprout Social -Standard tiers shown with prices; Enterprise tier shows "Contact us" with no price
 - Later - Starter/Growth/Advanced priced publicly; Enterprise row shows "Talk to Sales" button only
 - Koflucose -All plans are "Request a demo" - no self-serve pricing publicly shown
 - Popular Pays -Managed and Enterprise tiers both lead to "Schedule a call" - only self-serve has a public price
-

08. Footer Structure

(Anatomy of every site's footer | Universal - all 16 sites)

Dark or deep brand-coloured footer background

Every site uses a dark footer - dark grey, near-black, or the brand's darkest shade. This creates a visual full-stop for the page and frames the closing CTA section above it.

Examples

- Ko-fi - Dark charcoal (#1A1A2E) footer with white text - matches dark CTA section directly above
- CreatorIQ - Near-black (#0D0D0D) footer - enterprise minimalism
- Koflence - Deep purple footer matching primary brand colour - feels cohesive not arbitrary
- Later - Dark navy footer with muted purple tint - consistent with overall brand palette
- Passionfruit - Deep warm-black footer - contrasts with the cream/warm-white page body dramatically
- Aspire - Dark grey (#1C1C1E) footer - neutral, doesn't fight the brand colours used throughout

4–5 column link grid - Product, Company, Resources, Legal, Social

The footer organises all site links into labelled columns. Bold column heading + 4–8 links below each. This is the single most structurally consistent element across all 16 sites - the column labels vary slightly but the pattern is identical.

Examples

- Ko-fi - Logo + tagline · Product · For Creators · Resources · Company - 5-column grid

- CreatorIQ - Product · Solutions · Resources · Company · Legal - each with 5–8 sub-links
- Aspire - Platform · Strategy · Resources · Company - 4 columns with social icons in logo column
- Later - Features · Resources · Company · Help - 4 columns with newsletter signup in the 5th
- Qoruz- Product · For Brands · For Agencies · Resources · Company - audience-segmented column labels
- Passionfroot - Platform · Resources · Company · Legal - clean 4-column with social links beside logo
- Koflence -Platform · Solutions · Resources · Company - mirrors the main nav categories

Social media icon row - Twitter/X, LinkedIn, Instagram, YouTube

Icon-only links to company social accounts. Always outline/monochrome icons, never coloured platform logos. Placed top-right of footer or beside the logo. The exact set varies by platform's primary channel.

Examples

- Ko-fi - Twitter · Instagram · Facebook icons - creator-platform focus, less LinkedIn
- CreatorIQ - LinkedIn · Twitter · YouTube · Instagram - B2B emphasis means LinkedIn first
- Aspire - Instagram · LinkedIn · Twitter · YouTube - Instagram first because influencer marketing context
- Later - Instagram · Pinterest · TikTok · LinkedIn · Twitter - shows exactly which platforms they support
- Koflence -LinkedIn · Twitter · Instagram · Facebook - Indian market means Facebook still prominent
- Passionfroot - Twitter · LinkedIn · YouTube - B2B-skewed selection
- Qoruz - LinkedIn · Twitter · Instagram - clean three-icon set, no clutter

Copyright + Privacy Policy + Terms bottom bar

A thin separator line above a single footer bottom row: copyright year, company name, and 2–4 legal links. Always the same format - "© 2025 [Company]. Privacy Policy · Terms of Service".

Examples

- Ko-fi - "[© 2025 Ko-fi - Labs Limited · Privacy Policy · Terms of Service · Cookie Policy](#)"
 - Aspire - "[© 2025 Aspire - IQ Inc. · Privacy · Terms · Security](#)"
 - Later - "[© 2025 Later - · Privacy Policy · Terms of Service · Cookie Settings](#)" + GDPR cookie toggle
 - CreatorIQ - "[© 2025 CreatorIQ - · Privacy Policy · Terms · Accessibility](#)"
 - Passionfroot - "[© 2025 Passionfroot - · Privacy Policy · Terms](#)" - minimal, just 2 legal links
-

09. UX Micro-Patterns

(Small but recurring interaction and motion details | Very common (12+ of 16 sites))

Scroll-triggered fade-up animations on sections

Feature sections, cards, and stat numbers animate in as the user scrolls to them. Typical: opacity 0→1 + translateY(20–30px → 0) over ~400ms. Never instant-appear, never dramatic - subtle and consistent.

Examples

- Ko-fi - Feature rows fade in as you scroll - each card staggers 100ms after the previous one
- Passionfroot - Logo strip, testimonial cards, and platform capability cards all fade up on scroll entry
- CreatorIQ - Stats counter section animates up as it enters viewport, numbers count from 0
- Aspire - Creator profile cards in discovery section stagger in left-to-right as they enter view
- Later - Feature alternating rows slide up and fade in one at a time as user scrolls down
- Qoruz - Stats row animates numbers from 0 to final value when scrolled into view - creates a "counting up" effect
- Koflucose - Testimonial cards stagger fade-in left to right as the section enters the viewport

Auto-playing muted video in hero - always looping

Product demo or lifestyle video plays silently and loops in the hero area. Browser autoplay policy requires muted. All sites with video include a visible pause/play toggle. Videos are typically 10–30 seconds.

Examples

- Ko-fi - Product walkthrough video loop showing creator page earning - embedded beside hero text
- Passionfroot - Full-bleed hero background video showing the dashboard being used - muted, loops, with "Watch the trailer" CTA that opens unmuted modal
- Later - Auto-playing product demo of the content calendar - 15-second loop, plays behind text
- Aspire - Hero section shows a looping screen recording of the creator discovery flow
- CreatorIQ - Short looping animation of the campaign dashboard - animated data bars and creator match scores
- Sprout Social -Product demo video with play button overlay - click to play with sound, otherwise loops silently

Infinite horizontal marquee for logo/partner strips

The client logo row scrolls horizontally on an infinite CSS animation loop. Allows showing 12–20+ logos without needing a wider layout or carousel controls. Speed is always slow enough to read each logo.

- Examples
- Passionfroot - Two-row marquee of client logos - rows scroll in opposite directions for visual interest
- Aspire - Single row of ecommerce brand logos auto-scrolling left at ~40px/second
- CreatorIQ - Enterprise brand logos in a continuous left-scroll loop - Disney, AB InBev, Unilever repeat seamlessly
- Koflence -Two-row logo marquee with Indian brand clients - slow scroll, greyscale logos
- Later - Single-row marquee of partner/integration logos - showing which tools they connect with

Creator / influencer profile cards as live ecosystem proof

Platforms show actual creator profile cards - avatar, name, follower count, niche category - to demonstrate that real creators use the platform. Makes the ecosystem feel alive and relevant before signup.

Examples

- Ko-fi - Grid of real creator pages with names, supporter counts, and profile images - Drakoniques (200+), Exploding Heads (1.9k+), LivingTheSkyeLife (660+)
- Koflence -Grid of influencer cards showing follower count, niche, and engagement rate - segmented by category (Beauty, Tech, Fitness)
- Influencer.in -Featured creator profiles with Instagram handles, follower counts, and category tags
- Aspire - Creator match result cards in hero screenshot - shows real-looking profiles with engagement scores and audience breakdown
- Qoruz - Interactive creator search widget in hero - type a niche and real influencer results appear
- Popular Pays -UGC content grid showing real creator posts made for brand clients - visual proof of content quality
- Creator.co -Scrollable grid of creator profile tiles showing platform, follower range, and niche

Social platform icons (Instagram, YouTube, TikTok) as UI elements

Since these are all social/influencer platforms, they use recognisable social network logos as visual shorthand in feature sections - showing which platforms they support. Always shown as small pill-chips or a horizontal icon row.

Examples

- Qoruz - Instagram · YouTube · Twitter · Facebook pills shown as tabs in the hero search widget
- Later - Platform icon row (Instagram, TikTok, Pinterest, Twitter, LinkedIn) shown in features section to show multi-platform support
- Koflence -Platform logos as filter chips in the creator discovery feature screenshot
- Influencer.in -Instagram, YouTube, Facebook icons in a row below the headline - "We work across all major platforms"
- Aspire - Platform logo pills (Instagram, TikTok, YouTube, Pinterest) shown in creator profile cards in the feature screenshots

- Sprout Social -Full row of supported platform logos with official brand colours in the integrations section
- Chtrbox -Instagram, YouTube, Facebook icons as filter options in the influencer search feature display

Sticky mobile bottom CTA bar

On mobile viewports, a fixed bottom bar appears as users scroll - containing the primary CTA button. Keeps conversion always one tap away regardless of scroll position. Not visible on desktop.

Examples

- Ko-fi - Fixed "Sign up free" button bar at bottom of mobile screen - appears after scrolling past hero
- Later - Sticky "Get Started Free" bar on mobile - disappears when user reaches footer
- Passionfroot - Mobile sticky "Get access" pill button floats at the bottom of screen throughout scrolling
- Qoruz - Fixed bottom bar on mobile: "Sign Up" button + "Book a Demo" text link side by side
- Aspire - Mobile sticky CTA bar: "Book a Demo" - appears after hero is scrolled past
- Koflucose -Persistent bottom bar on mobile showing "Get Started" - present throughout the
